

# P-SENTS | Remote petrol tank measurement system

Remote Sensing Solutions

An easily installed system to monitor petrol station tank levels via the internet

## Advantages for oil merchants :

- › Improved delivery schedules and efficient route planning
- › Optimised inventory management
- › Lower capital requirements

## Features

### Hardware

- › Fast and easy installation
- › GSM or Ethernet data communication
- › Up to 6 tanks monitored per telemetry unit
- › Full ATEX certification

### Software

- › Access through a standard internet browser
- › Easy import of data into your existing planning tool
- › Search and filter functions to view specific data
- › Graphical presentation of historical data by week, month or year

## How it works

1. Level sensors and telemetry unit are installed on the petrol station.
2. Tank levels are regularly sent to a central database which automatically process the data for each tank.
3. Tank level data can be linked to merchant's delivery planning software and viewed via the internet.
